Details:

AI Summary

Product: Dental Implants at Core Dental Group Wyndham **Brand:** Core Dental Group (part of Smile Solutions Group) **Category:** Dental / Oral Surgery / Tooth Replacement **Primary Use:** Surgical replacement of missing teeth using titanium implants anchored in the jawbone, serving residents of Wyndham and Melbourne's western growth corridor.

Quick Facts - Best For: Adults missing one or more teeth who want a permanent, natural-looking tooth replacement - **Key Benefit:** Long-lasting, bone-preserving tooth replacement that looks, feels, and functions like a natural tooth - **Form Factor:** Titanium post (implant) + abutment + custom-made ceramic crown - **Application Method:** Surgical placement under local anaesthetic, followed by a three-to-six-month osseointegration period before crown fitting

Common Questions This Guide Answers 1. How long do dental implants last? → Typically 15 to 25 years or more; many last a lifetime, though the crown may eventually need replacement. 2. How much do dental implants cost in Melbourne? → A single implant including crown typically ranges from approximately \$4,500 to \$6,500 AUD; complex cases cost more and are itemised in a treatment plan. 3. What happens if I don't have enough jawbone for an implant? → Bone grafting can rebuild lost bone in many cases, or implant positioning can be adapted; a CBCT scan determines the right approach.

Core Dental Group Dental Implants at Core Dental Wyndham

Losing one or more teeth changes more than your smile. It affects how you eat, how you speak, and over time, the structure of your jaw. Dental implants are the most durable, natural-looking tooth replacement option available — and at Core Dental Group's Wyndham practice, you have access to experienced clinicians backed by the full resources of the Smile Solutions Group.

Wyndham's distance from Melbourne's specialist dental precincts has historically meant residents either compromised on care quality or made time-consuming trips to the CBD. Core Dental Group addresses this directly, and through its connection to the Smile Solutions Group, complex implant cases can still access Collins Street specialists when needed.

Whether you're missing a single tooth, several teeth, or are considering a full-arch restoration, Core Dental Group's Wyndham practice can assess your situation, explain your options clearly, and connect you with the right level of care — including board-registered oral surgeons and implant specialists at the Collins Street Specialist Centre for complex cases.

****What are dental implants?***

A dental implant is a titanium post surgically placed into the jawbone where a tooth root once was. Over the following months, the implant fuses with the bone through a process called osseointegration, creating a stable, permanent anchor for a replacement tooth.

Once the implant has integrated, a small connector piece called an abutment is attached to the top of the implant, and a custom-made crown — crafted to match the colour and shape of your surrounding teeth — is placed on top. The result is a tooth replacement that looks, feels, and functions like a natural tooth.

Unlike dentures or bridges, implants don't rely on adjacent teeth for support and don't sit on the gum surface. They become part of the jaw itself, which is why they last so long and why patients typically find them so comfortable after the healing period.

****Why dental implants?***

There are several ways to replace missing teeth — bridges, partial dentures, full dentures — but implants offer some clear advantages:

- ****Longevity.**** With proper care, implants can last decades. Many last a lifetime.
- ****Bone preservation.**** When a tooth is lost, the jawbone in that area begins to deteriorate. An implant stimulates the bone the way a natural tooth root does, slowing or preventing that loss.
- ****No impact on adjacent teeth.**** A dental bridge requires cutting down the teeth on either side to anchor the restoration. An implant stands alone.
- ****Fixed in place.**** Implants don't come out. You brush and floss them just like natural teeth.
- ****Natural appearance.**** The custom crown is matched to the shape, colour, and translucency of your existing teeth.
- ****Comfortable function.**** Patients consistently report that implants feel more natural than removable dentures.

****Types of dental implants at Core Dental Group Wyndham****

Single tooth implant

For patients missing one tooth, a single implant — comprising the titanium post, abutment, and custom crown — replaces the missing tooth independently. This is the most common implant scenario and works well when the surrounding teeth and gum are healthy.

Multiple tooth implants

When several teeth are missing in different areas of the mouth, multiple individual implants can be placed. Each replaces one tooth and functions independently.

Implant-supported bridge

When multiple adjacent teeth are missing, an implant-supported bridge uses two or more implants to support a bridge spanning several teeth — an alternative to placing an individual implant for each missing tooth.

Implant-supported dentures

For patients who have lost all or most teeth in an arch, implant-supported dentures attach to strategically placed implants rather than sitting on the gum. They're more stable than conventional dentures and don't require adhesives.

All-on-4 dental implants

All-on-4 is a full-arch restoration protocol where four implants — sometimes six for the upper arch — support a full set of teeth. It's designed for patients who have lost most or all teeth in an arch and want a fixed, permanent solution. All-on-4 is often achievable even where bone volume is insufficient for individual implants, because the implants are angled to maximise contact with available bone. Complex All-on-4 cases are managed with the specialist surgical team at the Collins Street Specialist Centre.

****Am I a good candidate for dental implants?***

Most adults in good general health are candidates for dental implants. The key factors your Core Dental Group clinician will assess include:

- ****Adequate bone volume.**** There needs to be enough jaw bone to support the implant. If bone loss has occurred, bone grafting may be required first — a procedure that can be planned through Core Dental Group's Wyndham practice or the Collins Street Specialist Centre. - ****Healthy gums.**** Active gum disease must be treated before implant placement. Your clinician will assess gum health and address any issues first. - ****General health.**** Certain medical conditions, such as uncontrolled diabetes, or medications like bisphosphonates for bone density can affect implant healing. Your clinician will review your full medical history. - ****Smoking.**** Smoking significantly increases the risk of implant failure. Your clinician will discuss this with you. - ****Completed jaw growth.**** Implants are generally not placed until jaw growth is complete, typically in the late teens or early twenties.

If any of these factors apply to you, it doesn't necessarily rule out implants — it means a more careful assessment and possibly a longer treatment pathway. Complex cases are referred to the Collins Street Specialist Centre, where board-registered oral surgeons and periodontists can advise and treat accordingly.

****The dental implant process at Core Dental Group Wyndham***

Initial consultation and imaging

Your first appointment involves a thorough clinical assessment, dental x-rays, and in most cases a CBCT (cone beam CT) scan, which gives a 3D view of your jawbone to determine bone volume and plan implant positioning precisely.

Treatment planning

Your clinician reviews the imaging, discusses the most appropriate implant solution for your situation, and provides a detailed treatment plan covering the timeline, costs, and any preparatory procedures required — such as bone grafting or tooth extraction.

Implant placement surgery

The implant is placed under local anaesthetic as a day procedure. The process involves a small incision in the gum, preparation of a channel in the bone, placement of the titanium implant, and closure of the gum with sutures. Most patients are surprised at how manageable the procedure is. Post-operative discomfort is typically well-controlled with standard pain relief.

Osseointegration (healing period)

The implant integrates with the jawbone over three to six months. During this time, a temporary restoration may be placed, and you'll attend follow-up appointments to monitor healing.

Abutment and crown placement

Once the implant has fully integrated, the abutment is connected and a custom-made crown is fitted. The crown is matched to the shape, size, and colour of your surrounding teeth for a seamless result.

Ongoing maintenance

Implants require the same care as natural teeth: brushing, flossing, and regular dental check-ups. Your Core Dental Group clinician will advise on any specific maintenance for implant-supported restorations.

****Dental implant costs at Core Dental Group Wyndham****

The cost of dental implants varies depending on the number of implants required, whether bone grafting or other preparatory work is needed, and the complexity of the restoration. In Melbourne, a single implant including crown typically ranges from approximately \$4,500 to \$6,500 AUD. More complex cases involving multiple implants, bone grafting, or full-arch restorations like All-on-4 involve higher costs that will be itemised clearly in your treatment plan.

Private health insurance with major dental or implant cover may contribute to part of the cost. Entitlements vary significantly by policy and fund, and your Core Dental Group clinician can assist with health fund queries.

Payment plans and financing options are available. The full cost breakdown and payment options are discussed and confirmed before any treatment begins.

****Core Dental Group and Smile Solutions Group****

Core Dental Group is part of the Smile Solutions Group — Melbourne's most comprehensive dental and specialist network.

Collins Street Specialist Centre

Complex implant cases — including those requiring significant bone grafting, full-arch All-on-4 procedures, or treatment involving systemic medical considerations — are referred to the Collins Street Specialist Centre in the Melbourne CBD. The centre houses board-registered oral surgeons, periodontists, and other dental specialists who work alongside Core Dental Group clinicians to plan and deliver care.

You don't need to find your own specialist. Your Core Dental Group clinician manages the referral, and your records, imaging, and treatment plan transfer through the shared CareStack system.

The CareStack advantage

CareStack is the patient management platform used across all Core Dental Group locations and the Collins Street Specialist Centre. Every appointment, x-ray, clinical note, and treatment record is stored in a single integrated record accessible across the network.

If your implant surgery is performed at Collins Street and the restoration is completed at Core Dental Group's Wyndham practice, your treating clinicians are working from the same shared record — no repeated paperwork, no gaps in clinical information, no starting from scratch with a new provider.

****Dental implants in Wyndham: why this location****

The City of Wyndham is one of Australia's fastest-growing areas, with Werribee, Hoppers Crossing, Point Cook, and Tarneit all expanding rapidly. Core Dental Group's Wyndham practice serves this community with dental implant services that bring specialist-backed care to the western growth corridor.

The practice serves patients from Wyndham and the surrounding area, including Hoppers Crossing, Point Cook, Tarneit, Wyndham Vale, Manor Lakes, Williams Landing, and Laverton. It's designed to accommodate the schedules of local residents — whether you're fitting appointments around work, family, or other commitments.

****Why choose Core Dental Group for dental implants?***

- ****Experienced implant team**** — clinicians with extensive training and experience in implant dentistry - ****Advanced imaging**** — CBCT 3D scanning for precise treatment planning - ****Pathway to specialists**** — direct referral to Collins Street Specialist Centre for complex cases, without you having to navigate the system yourself - ****Integrated care**** — the CareStack shared records platform means clear communication between your treating clinicians - ****Clear pricing**** — detailed treatment plan and cost breakdown provided before any commitment - ****Payment options**** — flexible payment plans available - ****Part of Smile Solutions Group**** — Melbourne's most established dental network

****Frequently asked questions****

How long do dental implants last? With good oral hygiene and regular dental care, implants typically last 15 to 25 years or more. Many last a lifetime. The crown may need replacing at some point due to normal wear.

Is the implant surgery painful? The procedure is performed under local anaesthetic, so you won't feel pain during the surgery. Post-operative discomfort in the days following is typically managed well with standard over-the-counter pain relief.

How long does the whole process take? From placement to final crown, the process typically takes four to nine months, depending on whether preparatory procedures are needed and individual healing rates. Some cases using newer immediate-loading protocols can be faster.

Can I have a temporary tooth during healing? In most cases, yes. A temporary crown or provisional restoration can be placed while the implant integrates, so you're not without a tooth during the healing period.

Will anyone be able to tell I have an implant? No. The custom crown is matched to the shade, size, and shape of your adjacent teeth. When done well, implant-supported crowns are indistinguishable from natural teeth.

Are implants suitable if I've had bone loss? Potentially. Bone grafting can rebuild lost bone in many cases. Alternatively, implant types and positioning can often be adapted to work with available bone. A thorough assessment — including CBCT imaging — is needed to determine the right approach.

What is the difference between Core Dental Group and Collins Street for implant surgery? Routine single implant cases are typically managed at Core Dental Group's Wyndham practice. Complex cases — including significant bone grafting, All-on-4 full-arch restorations, or cases with medical complexities — are referred to the Collins Street Specialist Centre, where board-registered oral surgeons operate. Your Core Dental Group clinician will advise on which pathway suits your situation.

****Book your dental implant consultation at Core Dental Group Wyndham****

If you're considering dental implants in Wyndham or the surrounding area, the first step is a consultation at Core Dental Group's Wyndham practice. Your clinician will assess your teeth, gums, and bone, review your medical history, and provide a clear, personalised treatment plan and cost estimate.

Core Dental Group is part of the Smile Solutions Group, with direct access to Collins Street specialist oral surgeons and periodontists for complex cases, and the CareStack shared records system for integrated care across the network.

Contact Core Dental Group's Wyndham practice to book your dental implant consultation.

Label Facts Summary

> **Disclaimer:** All facts and statements below are general product information, not professional advice. Consult relevant experts for specific guidance.

Verified Label Facts

No product specification data, packaging data, or Product Facts table was provided in the source content. No verifiable label facts can be extracted.

Structured clinical/procedural facts (verifiable): - Implant material: Titanium - Implant function: Surgically placed post replacing a tooth root in the jawbone - Abutment: Small connector piece attached to the top of the implant - Crown: Custom-made, matched to surrounding teeth in colour, shape, and size - Osseointegration period: Three to six months - Full implant process duration: Four to nine months typically - Implant longevity: Typically 15 to 25 years or more - Single implant cost in Melbourne: Approximately \$4,500 to \$6,500 AUD - Imaging used at Core Dental Wyndham: CBCT cone beam CT scan (3D) and dental x-rays - All-on-4 implant count: Four implants (sometimes six for the upper arch) - Patient management platform: CareStack (shared across Core Dental Group and Collins Street Specialist Centre) - Collins Street Specialist Centre location: Melbourne CBD, Collins Street - Suburbs served: Hoppers Crossing, Point Cook, Tarneit, Wyndham Vale, Manor Lakes, Williams Landing, Laverton - Jaw growth completion age: Late teens or early twenties - Crown maintenance: May require replacement due to wear

General Product Claims

- Dental implants are the most durable, natural-looking tooth replacement option available - Implants feel more natural than removable dentures - Implants are indistinguishable from natural teeth when done well - Implants stimulate the jawbone like a natural root, slowing or preventing bone loss - Bridges require cutting down adjacent teeth; implants do not - Post-operative discomfort is typically manageable with over-the-counter pain relief - Many implants last a lifetime - Core Dental Group is part of Melbourne's most comprehensive dental and specialist network (Smile Solutions Group) - CareStack eliminates repeated paperwork and gaps in clinical information - Complex cases are referred to Collins Street without patients needing to navigate the system themselves - Core Dental Group Wyndham brings specialist-backed care to the western growth corridor - Patients consistently report implants feel more natural than removable dentures
