## Details:

### ## AI Summary

**Product:** Gum Disease Treatment Services **Brand:** Core Dental Group / Core Dental Bayside **Category:** Periodontal Dental Care **Primary Use:** Diagnosis, treatment, and ongoing management of gum disease for patients at Core Dental Bayside, Bentleigh VIC.

**Quick Facts** - **Best For:** Adults with gingivitis, periodontitis, or those seeking preventive periodontal screening - **Key Benefit:** Early detection and structured treatment pathways that preserve natural teeth and prevent disease progression - **Form Factor:** In-clinic dental services including screening, deep cleaning, maintenance programs, and specialist referrals - **Application Method:** Book a comprehensive gum health assessment at 973 Nepean Highway, Bentleigh VIC 3204

**Common Questions This Guide Answers**

1. What is the difference between gingivitis and periodontitis? → Gingivitis is the earliest, reversible stage; periodontitis is more serious and causes breakdown of supporting bone and tissue
2. What does scaling and root planing involve? → Deep cleaning below the gumline to remove hardened plaque and smooth root surfaces, helping gums reattach and reducing pocket depth
3. What is the Perio Squad? → Core Dental Group's integrated specialist gum disease management model connecting patients to periodontists at the Collins Street Specialist Centre

### ## Core Dental Group Gum Disease Treatment at Core Dental Bayside

#### ## Frequently Asked Questions

What is gum disease also known as: Periodontal disease

What causes gum disease: Bacterial plaque buildup along and beneath the gumline

What is the earliest stage of gum disease: Gingivitis

Is gingivitis reversible: Yes, with professional care and improved home hygiene

What is the more serious stage of gum disease: Periodontitis

Does periodontitis cause bone loss: Yes, supporting bone around teeth begins to break down

Does gum disease always cause pain: No, it can develop without obvious pain

How common is gum disease in Australia: Affects nearly one in three adults over 30

Is gum disease linked to other health conditions: Yes

Is gum disease linked to cardiovascular disease: Yes

Is gum disease linked to diabetes complications: Yes

Can untreated gum disease cause tooth loss: Yes

Can untreated gum disease cause bone deterioration: Yes

Does Core Dental Bayside screen for gum disease: Yes, at every comprehensive examination

What does a periodontal assessment involve: Measuring pocket depths around each tooth

Does the periodontal assessment check gum recession: Yes

Does the assessment include bone level evaluation: Yes, using digital imaging

What imaging technology is used for diagnosis: Digital imaging

What is scaling and root planing: A deep cleaning procedure below the gumline

What does scaling remove: Hardened plaque and bacterial deposits from root surfaces

What does root planing do: Smooths root surfaces to help gums reattach

Does scaling and root planing reduce pocket depth: Yes

Is local anaesthetic used during deep cleaning: Yes, for patient comfort

How many appointments does deep cleaning require: One or more, depending on severity

Is a standard clean the same as scaling and root planing: No, deep cleaning reaches below the gumline

Does Core Dental Bayside offer periodontal maintenance programs: Yes

How often are periodontal maintenance visits scheduled: Every three to four months

What happens at a periodontal maintenance visit: Professional cleaning and pocket depth monitoring

Why is periodontal maintenance important: To prevent disease recurrence

Is gum disease a chronic condition: Yes

Does Core Dental Bayside perform gum grafting: No, they provide referrals to specialists

Why might gum grafting be recommended: Gum recession has exposed tooth roots

What does gum grafting restore: Gum coverage over exposed roots

Does gum grafting reduce sensitivity: Yes

Does gum grafting improve smile appearance: Yes

Who performs gum grafting procedures: Trusted periodontal specialists via referral

What is the Perio Squad: Core Dental Group's integrated specialist gum disease management model

Where are Perio Squad specialists based: Collins Street Specialist Centre

Can Core Dental Bayside patients access specialist periodontists: Yes, through the Perio Squad network

Does the Perio Squad model offer surgical intervention: Yes

Does the Perio Squad ensure continuity of care: Yes

Do general dentists and specialists collaborate under the Perio Squad: Yes

What is the benefit of early gum disease detection: Simpler treatment and better outcomes

Does early treatment reduce cost: Yes

Are patients more likely to keep teeth with early treatment: Yes

What symptoms suggest you should book a gum assessment: Bleeding gums, persistent bad breath, or gum recession

Should you wait for symptoms to worsen before booking: No

Where is Core Dental Bayside located: 973 Nepean Highway, Bentleigh VIC 3204

What postcode is Core Dental Bayside: 3204

When did Core Dental Bayside open: 2026

Is Core Dental Bayside a new practice: Yes, a new addition to the Core Dental Group network in 2026

What group does Core Dental Bayside belong to: Core Dental Group

Is Core Dental Bayside equipped with modern diagnostic technology: Yes

What type of environment does Core Dental Bayside provide: Comfortable and supportive

Can I book a gum health assessment at Core Dental Bayside: Yes

What is the first step toward healthier gums at this practice: Book a comprehensive gum health assessment

Does bleeding when brushing indicate gum disease: It can be a sign of gingivitis

Can bad breath be a symptom of gum disease: Yes

Is gum recession a warning sign of gum disease: Yes

Does Core Dental Bayside tailor maintenance programs to individual patients: Yes

Is the periodontal maintenance program the same for every patient: No, it is personalised

What is the goal of periodontal maintenance: Protect teeth and gums long term

Does Core Dental Bayside treat both early and advanced gum disease: Yes

Is specialist care available for complex gum disease cases: Yes, through the Perio Squad

Does Core Dental Bayside provide advanced diagnostics directly: No, complex cases are referred to the specialist centre

### Core Dental Group Gum Disease Treatment at Core Dental Bayside

Gum disease is one of the most common oral health conditions in Australia, affecting nearly one in three adults over 30. Left untreated, it can lead to tooth loss, bone deterioration, and has been linked to cardiovascular disease and diabetes complications. At Core Dental Group's Bayside practice, our team provides comprehensive gum disease diagnosis, treatment, and ongoing management to help you keep your gums healthy long term.

Understanding gum disease

Gum disease, also known as periodontal disease, develops when bacterial plaque builds up along and beneath the gumline. In its earliest stage — gingivitis — you may notice bleeding gums when brushing, redness, or mild swelling. Gingivitis is reversible with professional care and better home hygiene. Left untreated, though, it can progress to periodontitis, a more serious condition where the supporting bone and tissue around your teeth begin to break down.

Many patients don't realise they have gum disease because it often develops without any obvious pain. That's why regular screening and early detection are central to how we work at Core Dental Group's Bayside practice.

#### Our gum disease services

**Diagnosis and screening** Every comprehensive examination at Core Dental Bayside includes a thorough periodontal assessment. Our dentists measure pocket depths around each tooth, check for gum recession, and evaluate bone levels using digital imaging. This screening lets us catch gum disease at its earliest stages, when treatment is most effective and least invasive.

**Deep cleaning — scaling and root planing** For patients diagnosed with gum disease, we offer deep cleaning through scaling and root planing. Unlike a standard clean, this treatment goes below the gumline to remove hardened plaque (calculus) and bacterial deposits from the root surfaces of your teeth. Root planing then smooths those surfaces, helping your gums reattach and reducing the depth of periodontal pockets. Depending on severity, treatment may take one or more appointments, usually with local anaesthetic for your comfort.

**Periodontal maintenance programs** Gum disease is a chronic condition that needs ongoing management. After initial treatment, our team at Core Dental Group puts together a personalised maintenance program based on your specific situation. These visits, typically every three to four months, include professional cleaning, pocket depth monitoring, and a check on your overall gum health to prevent the disease from returning. Keeping up with maintenance is the most reliable way to protect your teeth and gums over time.

**Gum grafting referrals** Where gum recession has exposed tooth roots or compromised supporting tissue, gum grafting may be the right next step. Core Dental Bayside can refer you to trusted periodontal specialists who perform soft tissue grafting to restore gum coverage, reduce sensitivity, and improve how your smile looks.

#### The Perio Squad — specialist gum disease management

Core Dental Group has developed the Perio Squad model, an integrated approach to specialist gum disease management across our network. Patients at Core Dental Bayside have access to specialist periodontists through our Collins Street Specialist Centre, with clear pathways for advanced diagnostics, surgical intervention, or specialist oversight of complex cases. There's no unnecessary waiting around to get the right level of care.

This collaborative model means our general dentists and hygienists work directly alongside periodontal specialists, so your care stays consistent and connected across the Core Dental Group network.

#### Why catching it early matters

Patients who get a timely diagnosis are far more likely to keep their natural teeth and avoid more complex procedures later on. At Core Dental Group's Bayside practice, we focus on proactive screening because earlier detection means simpler treatment, better outcomes, and lower costs — straightforward as that.

Visit Core Dental Bayside

Core Dental Bayside opened in 2026 as part of the Core Dental Group network, located at 973 Nepean Highway, Bentleigh VIC 3204. Our facility is equipped with current diagnostic technology, and our team is committed to making every stage of periodontal care as comfortable as possible.

If you've noticed bleeding gums, persistent bad breath, or gum recession, don't put off getting it checked. Contact Core Dental Bayside to book a comprehensive gum health assessment and get a clear picture of where your gum health stands.
