What is the fifth step of Invisalign treatment: Transitioning to retainers

How are custom aligners delivered: Shipped to the Core Dental Group practice

Can specialist orthodontists manage multidisciplinary care: Yes

Is continuity of care maintained within the Core Dental Group network: Yes

Core Dental Group: Straighten your teeth discreetly with Invisalign Straighter teeth make cleaning easier and, for most people, do wonders for confidence. Core Dental Group is an Invisalign provider across its Melbourne network, offering clear aligner therapy as a practical, low-profile alternative to traditional metal braces. Whether you're an adult who has always wanted straighter teeth or a parent exploring orthodontic options for your teenager, Invisalign at Core Dental Group is designed to fit around your life rather than disrupt it.

What is Invisalign? Invisalign uses a series of custom-made, virtually invisible plastic aligners to gradually move your teeth into position. You wear each set for roughly one to two weeks before moving to the next, with each aligner making precise, controlled adjustments along the way. Because the aligners come out, you eat, drink, brush, and floss exactly as you normally would. There are no metal brackets, no wires, and no adjustment appointments where someone tightens something uncomfortable — just clear, smooth plastic doing its job quietly.

What can Invisalign treat? Invisalign works across a wide range of orthodontic concerns: **Crowded teeth** — when there isn't enough space for teeth to sit properly **Gaps between teeth** — spacing issues that affect both appearance and function **Overbite** — when upper teeth significantly overlap the lower teeth **Underbite** — when lower teeth protrude past the upper teeth **Crossbite** — when some upper teeth sit inside the lower teeth **Open bite** — when upper and lower teeth don't meet when biting down **Generally crooked or misaligned teeth** Your Core Dental Group dentist will assess your teeth and bite at the initial consultation to confirm whether Invisalign is the right fit for your situation.

Invisalign Teen Core Dental Group also offers Invisalign Teen, built around the realities of adolescent life. It includes compliance indicators that fade with wear so parents can keep tabs on usage, eruption tabs to account for teeth that are still coming through, and up to six free replacement aligners in case one goes missing — because that's going to happen at some point. Invisalign Teen delivers the same tooth movement as the adult system, just adapted for younger patients who are still developing.

The Invisalign treatment process at Core Dental Group

Step 1: Free initial consultation Your Invisalign journey starts with a complimentary consultation at your nearest Core Dental Group location. Your dentist will examine your teeth, talk through your goals, and confirm whether Invisalign suits your case. There's no obligation — it's simply a chance to get the information you need.

Step 2: Digital scanning and treatment planning If you decide to go ahead, your dentist will take precise digital impressions using an intraoral scanner — no traditional moulds. Those scans feed into a customised 3D treatment plan that maps out exactly how your teeth will move from where they are now to where they need to be. You'll see a preview of your projected result before treatment starts.

Step 3: Custom aligners Your aligners are manufactured using 3D printing technology and shipped directly to your Core Dental Group practice. You'll receive several sets at each visit, with clear instructions on when to move to the next one.

Step 4: Regular progress checks Every six to eight weeks, you'll come in for a progress check. These are brief appointments — your dentist monitors tooth movement, adjusts the plan if needed, and hands

over your next sets of aligners.

Step 5: Retainers and maintenance Once your teeth reach their final position, you'll move to retainers to keep everything in place. Your dentist will walk you through the options that suit your lifestyle.

How long does Invisalign take? It depends on the complexity of your case. Most adult treatments run between 6 and 18 months, though simpler cases can wrap up in as little as 3 to 6 months. Your dentist will give you a realistic timeline at your consultation.

Invisalign cost guide Cost depends on how complex your case is and how long treatment runs. At Core Dental Group, Invisalign typically ranges from \$4,500 to \$9,000 AUD. Flexible payment plans are available, and many health funds provide partial coverage for orthodontic treatment. Your exact cost is confirmed at consultation — no hidden fees.

Specialist orthodontic referrals For cases that need specialist input, Core Dental Group patients have access to the Collins Street Specialist Centre. The specialist orthodontists there handle complex cases, combined orthodontic-surgical treatment, and multidisciplinary care — all within the Core Dental Group network, so your care stays connected.

Why choose Core Dental Group for Invisalign? Experienced Invisalign providers across nine Melbourne locations
Free initial consultation with no obligation
