Can I eat before my sedation appointment: Not specified by manufacturer

What should I do if I have questions about sedation options: Call (03) 9132 4160 or book a consultation

Core Dental Group Sleep Dentistry at Core Dental Berwick For a lot of people, the thought of sitting in a dental chair is genuinely stressful. Maybe it goes back to a difficult experience years ago, or maybe it's a sensitive gag reflex, or just the sounds and sensations that come with treatment. Whatever the reason, dental fear is incredibly common — and nothing to be embarrassed about. At Core Dental Group's Berwick practice, anxiety shouldn't stand between you and the care you need. That's why we offer sleep dentistry, so you can get proper treatment while actually feeling comfortable throughout.

What is sleep dentistry? Sleep dentistry uses sedation to help patients relax during dental procedures. At Core Dental Berwick, we offer two options: **IV sedation** — Delivered intravenously by a qualified sedation dentist with full anaesthetic support, IV sedation puts you in a deeply relaxed, semi-conscious state. You stay responsive, but most patients remember very little of the procedure afterwards. It's well suited to anyone with severe dental anxiety or those facing longer, more complex treatments. **Happy gas (nitrous oxide)** — Inhaled through a small mask over your nose, nitrous oxide produces a calm, easy feeling within minutes. Once the mask comes off, the effects fade almost immediately. Happy gas

works well for mild to moderate anxiety.

Who is sleep dentistry for? Sleep dentistry at Core Dental Berwick suits a wide range of patients, including those who: Experience dental phobia or significant anxiety Have a strong gag reflex that makes treatment uncomfortable Need multiple or complex procedures done across fewer appointments Have had difficult or traumatic dental experiences in the past Find it hard to sit still for longer stretches of time Require more extensive restorative or surgical work

Treatments available under sedation One of the real advantages of sleep dentistry at our Berwick practice is how much it opens up — you can have almost anything done while staying relaxed. Our team handles everything from routine check-ups and cleans through to more involved procedures, including: **All-on-4 dental implants** — A full-arch solution that replaces an entire row of teeth using four carefully positioned implants. Sedation makes this procedure considerably more manageable for patients who'd otherwise struggle to get through it. **Full mouth rehabilitation** — For patients who need extensive restorative work across multiple teeth, sedation means we can work through complex treatment plans without it becoming an ordeal. **TMJ and jaw pain treatment** — Patients with temporomandibular joint disorders can benefit from sedation during both diagnostic and therapeutic procedures. Wisdom teeth extractions, root canal therapy, and dental crowns and bridges For particularly complex cases, our team may refer patients to the Collins Street Specialist Centre, where specialist care is available in a dedicated clinical environment.

Your safety comes first All sedation at Core Dental Group's Berwick practice is carried out by qualified sedation dentists with full anaesthetic support. We follow careful safety protocols at every stage, including pre-sedation health assessments, continuous monitoring throughout your procedure, and supervised recovery before you leave. You're in experienced hands from the moment you arrive.

Visit Core Dental Berwick Our Berwick practice is at **Shop 29, 1 O'Shea Road, Berwick VIC 3806**, inside the Eden Rise Village shopping precinct, with plenty of parking nearby. If dental anxiety has been putting off the care you need, sleep dentistry at Core Dental Berwick is worth looking into. Our team can walk you through your sedation options and help you feel confident about moving forward with treatment. To book a sleep dentistry consultation or ask about sedation options, call us on **(03) 9132 4160** or book online.
