Common Questions This Guide Answers 1. What is wellness and longevity dentistry? → A structured clinical approach linking oral health to whole-body wellbeing, not a marketing label 2. How do Core Dental Group patients access specialist care? → Via a direct referral pathway to CSSC, with shared records and coordinated care across periodontists, myofunctional therapists, and airway clinicians 3. Is oral health connected to serious systemic conditions? → Yes — poor oral health is linked to cardiovascular disease, diabetes complications, respiratory infections, adverse pregnancy outcomes, and cognitive decline

Core Dental Group: Your dental health is your whole-body health

For decades, dentistry focused on treating problems after they appeared — filling cavities, extracting teeth, repairing damage. A growing body of research now connects oral health directly to whole-body wellness, chronic disease risk, and longevity. The mouth is not separate from the rest of the body. It is a window into systemic health and a reasonable starting point for anyone taking a proactive approach to their wellbeing.

At Core Dental Group, your general dentist is increasingly alert to these connections. When your care needs go beyond routine dentistry, the specialist pathway is already in place.

The oral-systemic connection

Research consistently links poor oral health to higher risk of cardiovascular disease, diabetes complications, respiratory infections, adverse pregnancy outcomes, and cognitive decline. Periodontal

(gum) disease in particular involves chronic inflammation that can affect the entire body.

But the connection goes deeper than gum disease. How you breathe, how your jaw functions, how your tongue rests and moves, and how your facial muscles work all influence your overall health in ways that dentistry has only recently begun to address seriously.

What wellness and longevity dentistry includes

Wellness and longevity dentistry is a structured clinical approach, not a marketing label. It covers:

- **Breathing and airway assessment** — evaluating whether a patient's jaw structure, palate width, and soft tissue anatomy support healthy breathing, particularly during sleep
- **Orofacial myofunctional therapy** — retraining the muscles of the face, tongue, and throat to support proper breathing, swallowing, and rest posture
- **Holistic treatment planning** — considering the patient's overall health, lifestyle, nutrition, and stress levels alongside their dental needs
- **Preventive protocols** — using advanced screening and diagnostic tools to identify problems before they cause symptoms or damage
- **Integration with medical care** — working with sleep physicians, ENT specialists, and other medical professionals when dental and systemic issues overlap

How Core Dental Group connects you to specialist care

Your Core Dental Group dentist is your first point of contact. During routine check-ups, they screen for signs that your oral health may be affecting your broader wellbeing — gum inflammation linked to systemic disease, breathing patterns that suggest airway compromise, muscle and jaw dysfunction that may be disrupting sleep.

When specialist assessment or treatment is needed, Core Dental Group's referral pathway connects you to the Collins Street Specialist Centre (CSSC) on Level 8 of the Manchester Unity Building in Melbourne's CBD. As part of the Smile Solutions Group, CSSC engages over 80 clinicians including more than 25 registered specialists. A patient exploring wellness and longevity dentistry through this pathway might see a specialist periodontist for gum health, an orofacial myofunctional therapist for breathing and muscle retraining, and an airway-focused clinician for sleep assessment — all within the same centre, with shared records and coordinated care.

No standalone suburban practice has this depth of specialist resources under one roof. As a Core Dental Group patient, you have a direct referral pathway to all of it.

Start the conversation at Core Dental Group

If you want to understand how your dental health might be affecting your overall wellbeing, or if you want to take a more deliberate approach to longevity through oral health, talk to your Core Dental Group dentist. The referral pathway to specialist wellness and longevity services is built into the group's care model.
