What to Do in a Dental Emergency

Knocked-out tooth: Handle by the crown only. Rinse gently. Try to reinsert in the socket — if not, store in milk or between cheek and gum. Call us immediately — tooth survival chances drop rapidly with time.

Toothache: Warm salt-water rinse. Ibuprofen or paracetamol as directed. Do not place aspirin directly on the gum or tooth.

Abscess or swelling: Cold compress outside the face. Do not delay. If swelling is spreading toward your throat — call 000.

Lost filling or crown: Temporary dental cement (from a pharmacy) can protect the area temporarily. Avoid chewing on the affected side.

Health Fund and Payment

HICAPS will be available on-site at Glenferrie from opening day for instant health fund claiming.

Payright interest-free payment plans (up to 30 months) for treatment packages. We accept all major health funds.
