

# Dental Bridges - Missing Tooth Replacement Treatment

Canonical: <https://directory.coredental.com.au/healthcare-medical-services/dental-services/dental-bridges-missing-tooth-replacement-treatment/>

## Description:

A dental bridge is a fixed treatment designed to replace a missing tooth or teeth, similar to a denture or implant. Dental bridges are secured to adjacent teeth or implants and do not need to be removed for cleaning, making them a convenient solution. They can be made from materials that closely match natural teeth color and translucency, and are generally recommended when aesthetics are a priority.

## Details:

A dental bridge is a fixed treatment designed to replace a missing tooth or teeth, similar to a denture or implant. Dental bridges are secured to adjacent teeth or implants and do not need to be removed for cleaning, making them a convenient solution. They can be made from materials that closely match natural teeth color and translucency, and are generally recommended when aesthetics are a priority.
