## Root Canal Treatment at Core Dental Wyndham

\*\*Core Dental Wyndham | 242 Hoppers Ln, Werribee VIC 3030 | (03) 9749 6677 | wyndham@coredental.com.au\*\*

Severe tooth pain does not have to be something you simply endure. At Core Dental Wyndham, our experienced team provides effective, gentle root canal treatment to relieve pain, eliminate infection, and save your natural tooth. Located near Pacific Werribee Shopping Centre with on-site parking, we make it easy to get the care you need.

### ### What Is Root Canal Treatment?

Root canal treatment is the most reliable way to save a tooth that has become infected or severely inflamed from the inside. Inside each tooth is a soft tissue called the pulp, containing the tooth's nerves and blood vessels. When bacteria enter the pulp - through deep decay, a crack, or an injury - the result is infection, inflammation, and often considerable pain.

Root canal treatment removes the infected pulp tissue, thoroughly cleans and shapes the internal canals of the tooth, and seals them to prevent the infection from returning. A dental crown placed over the treated tooth afterwards restores full function and prevents fracture. The end result is a saved natural tooth that functions exactly like any other.

### ### How Do I Know If I Need a Root Canal?

The following signs suggest you may have a dental infection requiring root canal treatment:

- A persistent or severe toothache - Pain that intensifies when you bite or put pressure on the tooth - Prolonged sensitivity to hot or cold food and drinks - A tooth that has become noticeably darker - Swelling of the gum, cheek, or jaw near the affected tooth - A small pimple or boil on the gum that may drain fluid - A foul taste or smell in the area

You may also have an infected tooth with no pain at all - a reason why regular check-ups with digital X-rays are so important. If you suspect a problem, do not wait. Core Dental Wyndham offers emergency appointments daily.

### ### Root Canal Treatment - Step by Step

Root canal treatment is carried out under local anaesthetic. You will be fully numb and comfortable throughout. Here is how a typical course of treatment proceeds:

1. **Assessment and imaging** - Digital X-rays confirm the diagnosis and extent of infection 2. **Local anaesthetic** - The tooth and surrounding area are thoroughly numbed 3. **Access preparation** - A small opening in the tooth crown provides access to the pulp 4. **Pulp removal** - All infected or inflamed pulp tissue is carefully removed 5. **Canal cleaning and disinfection** - Fine instruments and antibacterial irrigants clean and shape the canals 6. **Sealing** - The canals are filled with a biocompatible material and the tooth is sealed 7. **Crown placement** - A custom dental crown protects and restores the treated tooth

Root canal treatment typically takes one to three appointments.

### ### Specialist Endodontist Available for Complex Cases

Core Dental Wyndham has strong referral pathways for complex endodontic cases. If your root canal treatment requires specialist attention - such as re-treatment of a previously filled tooth, severely calcified canals, or complex multi-rooted teeth - your dentist will arrange a referral to specialist endodontists at the Collins Street Specialist Centre. Dr Greg Tilley (BDS, FRACDS, MRACDS Endo) has over 35 years of specialist experience and works closely with Core Dental patients.

### ### About Core Dental Wyndham

Core Dental Wyndham is the most specialist-rich suburban Core Dental location, with both a specialist periodontist (Dr Nupur Kataria) and specialist orthodontist (Dr David Austin) on-site. Our lead dentist, Dr Darren Manoharan, has 15 years of experience in complex restorative dentistry, crown and bridge work, implants, and Invisalign. We are preferred providers for HCF, CBHS, and NIB health funds.

Bengali-language support is available (Dr Anika Moyeed).

### ### Book at Core Dental Wyndham

We are located at 242 Hoppers Ln, Werribee VIC 3030, near Pacific Werribee Shopping Centre, with on-site parking.
